DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-5, drawn to a drill press modified for combining a conventional drill press and wood lathe functions into a two-in-one machine, classified in class 29, subclass 26A.
- II. Claims 6-9, drawn to an accessory kit used to provide stand-by wood lathe functions, classified in class 142, subclass 55.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not specifically claim the use of a tool rest. The subcombination has separate utility such as use with a with a drill press/wood lathe machine which does not use a belt-pulley transmission system.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
